

EQUIMEC[®] Plus Tape for Horses — the facts !

Roundworm, Tapeworm and Bot Treatment for Horses
Ivermectin 8 mg/g and praziquantel 100 mg/g

PRODUCT DESCRIPTION

EQUIMEC Plus Tape combines the power of ivermectin and praziquantel to provide complete protection against all major equine parasites, including potentially life threatening tapeworms.

PRODUCT BENEFITS

- ✓ Broad spectrum roundworm, tapeworm and bot activity
- ✓ Controls all the important internal parasites
- ✓ Convenient-graduated trigger applicator
- ✓ Can be used at any age, and at any stage of pregnancy
- ✓ Aniseed flavoured
- ✓ Gel sticks to horses mouth and easily swallowed
- ✓ Wide safety margin
- ✓ Low dose – 1 ml per 40 kg bodyweight
- ✓ Brought to you by Merial – the leader in equine parasite control.

TREATS AND CONTROLS*

- Tapeworms
- Large Strongyles
- Small Strongyles (including strains that have become resistant to benzimidazole)
- Pinworms
- Ascarids
- Hairworms
- Large-Mouth Stomach Worms
- Neck Threadworms
- Bots
- Lungworms
- Intestinal Threadworms
- Skin lesions caused by *Habronema* and *Draschia* spp. cutaneous larvae (summer sores) and *Onchocerca* spp microfilariae (cutaneous onchocerciasis).

SAFETY

EQUIMEC Plus Tape has a wide margin of safety at the recommended dose level and may be used in horses of all ages. Mares may be treated at any stage of pregnancy. Stallions may be treated without adversely affecting their fertility.

PACK SIZE

15g
 Low dose volume - easy to use trigger syringe.
 Adjust dosage control knob to horse's bodyweight,
 lock in place and press plunger.

OIL BASED ADVANTAGE

EQUIMEC Plus Tape has a gel formulation with a thickened vegetable oil base. This enables easy dosing, and minimizes wastage from the horse's mouth. The product is aniseed flavoured, encouraging ingestion, rather than the horse spitting it out.

PACK SIZES

15 g

DOSE RATE

1 mL/40 kg bodyweight, given orally, which delivers 0.2 mg/kg ivermectin and 2.5 mg/kg praziquantel.

The contents of one syringe will treat one horse at 600 kg bodyweight. Each weight marking on the syringe plunger will deliver 2.5 g of paste which is sufficient to treat 100 kg bodyweight.

SUGGESTED PARASITE CONTROL PROGRAM

Treat all the horses due for treatment on the property at the same time. Foals should be treated initially at 6 to 8 weeks of age, and routine treatment repeated as appropriate. Generally, young horses, brood mares, yearlings and horses exposed to high levels of reinfection should be drenched every 6-8 weeks. For horses lightly stocked in large paddocks this may be extended out to every 10-12 weeks.

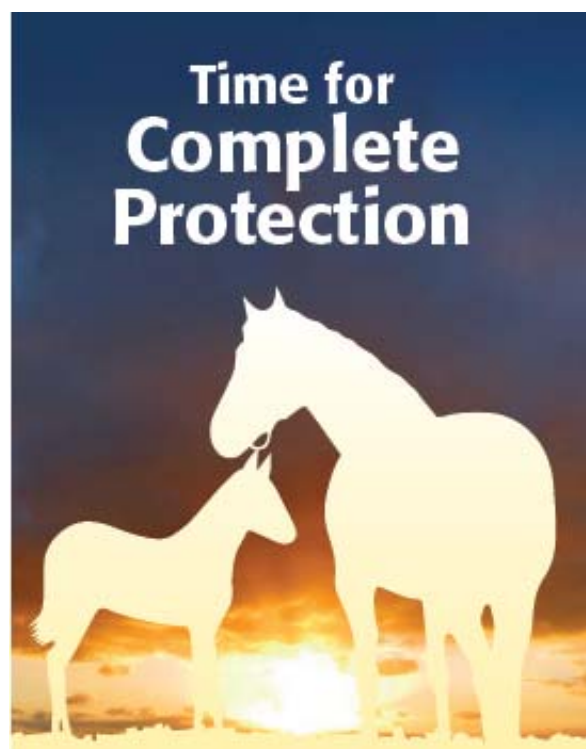

All horses should be included in a regular parasite control program. Consult your veterinarian for a control program to meet your specific needs.
